7. Declared performance/s:

#### Mechanical resistance and stability (BWR 1)

| Essential characteristic                                                | Performance                                 |
|-------------------------------------------------------------------------|---------------------------------------------|
| Characteristic resistance for static and quasi static action for design | See appendix, especially Annexes C 1 to C 3 |
| according to ETAG 001 Annex C or CEN/TS 1992-4:2009                     |                                             |
| Characteristic resistance for Seismic performance categories C1 and C2  | See appendix, especially Annexes C 6 to C 7 |
| Displacements under static and quasi static action                      | See appendix, especially Annex C 8          |
| Displacements under seismic action                                      | See appendix, especially Annex C 9          |

#### Safety in case of fire (BWR 2)

| Essential characteristic                      | Performance                                   |
|-----------------------------------------------|-----------------------------------------------|
| Reaction to fire                              | Anchorages satisfy requirements for Class A 1 |
| Characteristic resistance under fire exposure | See appendix, especially Annex C 4, C 5       |

8. Appropriate Technical Documentation and/or Specific Technical Documentation: ---

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

1.V. A. Dun

Andreas Bucher, Dipl.-Ing.

Wolfgang Hengesbach, Dipl.-Ing., Dipl.-Wirtsch.-Ing.

i.V. W. Mylal

Tumlingen, 2015-03-11

- This DoP has been prepared in different languages. In case there is a dispute on the interpretation the english version shall always prevail.

- The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

#### **Specific Part**

#### 1 Technical description of the product

The fischer Bolt Anchor FAZ II is an anchor made of galvanised steel (FAZ II) or made of stainless steel (FAZ II A4) or high corrosion resistant steel (FAZ II C) which is placed into a drilled hole and anchored by torque-controlled expansion.

The product description is given in Annex A.

## 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

#### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic                                                                                                    | Performance          |
|-----------------------------------------------------------------------------------------------------------------------------|----------------------|
| Characteristic resistance for static and quasi static action for design according to ETAG 001 Annex C or CEN/TS 1992-4:2009 | See Annex C 1 to C 3 |
| Characteristic resistance for Seismic performance categories C1 and C2                                                      | See Annex C 6 to C 7 |
| Displacements under static and quasi static action                                                                          | See Annex C 8        |
| Displacements under seismic action                                                                                          | See Annex C 9        |

#### 3.2 Safety in case of fire (BWR 2)

| Essential characteristic                      | Performance                                  |
|-----------------------------------------------|----------------------------------------------|
| Reaction to fire                              | Anchorages satisfy requirements for Class A1 |
| Characteristic resistance under fire exposure | See Annex C 4,C 5                            |

#### 3.3 Hygiene, health and the environment (BWR 3)

Not applicable.

#### 3.4 Safety in use (BWR 4)

The essential characteristics regarding Safety in use are included under the Basic Works Requirement Mechanical resistance and stability.

#### 3.5 Protection against noise (BWR 5)

Not applicable.

#### 3.6 Energy economy and heat retention (BWR 6)

Not applicable.

#### 3.7 Sustainable use of natural resources (BWR 7)

The sustainable use of natural resources was not investigated.

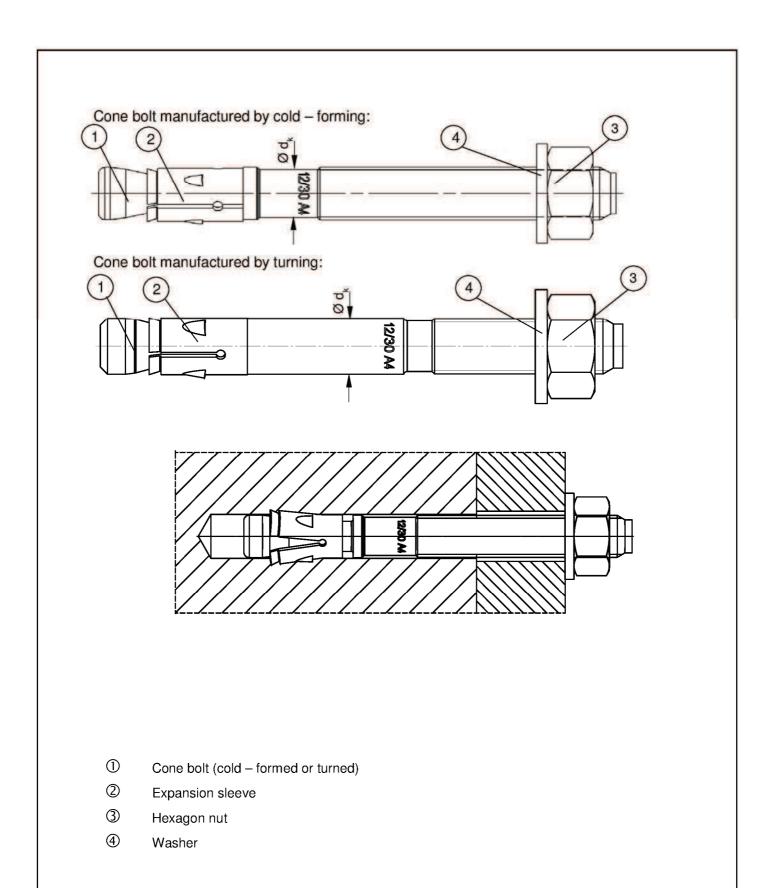

#### 3.8 General aspects

The verification of durability is part of testing the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are taken into account.

# 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

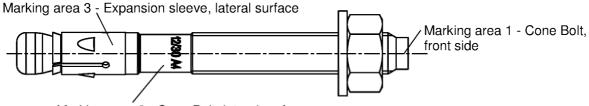

According to Decision of the Commission of 24 June 1996 (96/582/EC) (OJ L 254 of 08.10.96 p. 62-65), the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

| Product                                             | Intended use                                                                                                     | Level or class | System |
|-----------------------------------------------------|------------------------------------------------------------------------------------------------------------------|----------------|--------|

<sup>1)</sup> FAZ II C: Only valid for cold-formed version (see A1)

#### Base materials:

- Reinforced and unreinforced normal weight concrete (cracked and non-cracked according to EN 206:2013.
- Strength classes C20/25 to C50/60 according to EN 206:2013

#### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FAZ II, FAZ II A4, FAZ II C).
- Structures subject to external atmospheric exposure including industrial and marine environment or exposure
  to permanently damp internal condition, if no particular aggressive conditions exist.
  (FAZ II A4, FAZ II C).
- Structures subject to external atmospheric exposure and permanently damp internal condition or in other particular aggressive conditions (FAZ II C).

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

#### Design:

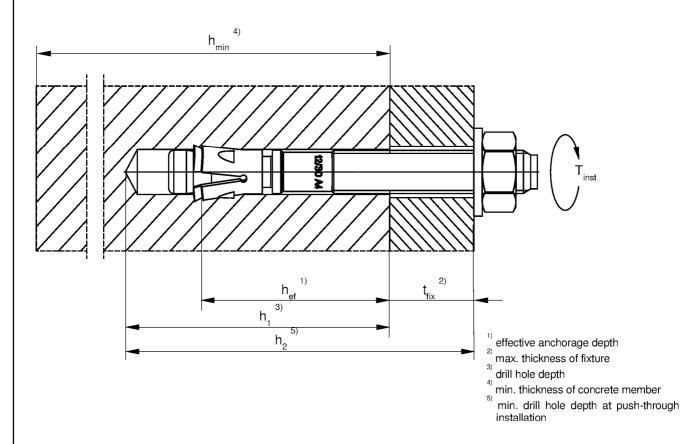

- Anchorages are to be designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under static or quasi-static actions are to be designed in accordance with (please choose the relevant design method):
  - ETAG 001, Annex C, design method A, Edition August 2010 or
  - CEN/TS 1992-4:2009, design method A
- Anchorages under seismic actions (cracked concrete) are to be designed in accordance with:
  - EOTA Technical Report TR 045, Edition February 2013
  - Anchorages shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure.
  - Fastenings in stand-off installation or with a grout layer under seismic action are not allowed.
- Anchorages under fire exposure are to be designed in accordance with:
  - EOTA Technical Report TR 020, Edition May 2004
  - CEN/TS 1992-4:2009, Annex D
  - It must be ensured that local spalling of the concrete cover does not occur.

Intermediate values for  $s_{\text{min}}$  and  $c_{\text{min}}$  inside of the same thickness of concrete member by linear interpolation.

**Table B3:** Minimum thickness of concrete members, minimum spacings and minimum edge distances of anchors for **reduced anchorage depth (h**<sub>ef, red</sub>)

|                                  | Type of anchor / size                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                 |     | FAZ II, FAZ II A4, FAZ II C |     |  |  |  |

#### **Installation instructions**

The fitness for use of the anchor can only be assumed if the anchor is installed as follows:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- · Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor
- Checking before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply.
- · Check of concrete being well compacted, e.g. without significant voids
- Edge distances and spacing not less than the specified values without minus tolerances.

In absence of other national regulations the partial safety factor for resistance under fire exposure  $\gamma_{M,fi}$  = 1,0 is recommended.

fischer Bolt anchor FAZ II, FAZ II A4, FAZ II C

Performances:
Characteristic values of resistance under tension loads and
(Design according to TR 020 and ETAG 001, Annex C or CEN/TS 1992-4: 2009, Annex D)

Table C5: Characteristic values of shear resistance under fire exposure in cracked and non-cracked concrete for standard and reduced anchorage depth (Design according to TR 020 and ETAG 001, Annex C or CENT/TS 1992-4:2009, Anhang D)

Concrete pryout failure: In Equation (5.6) of ETAG 001, Annex C, 5.2.3.3 the k-factor of Table 8 and the relevant values of  $N_{0Rk,c,fi}$  of Table 10 have to be considered.

**Concrete edge failure:** The characteristic resistance  $V^0_{Rk,c,fi}$  in concrete C20/25 to C50/60 is determined by:  $V^0_{Rk,c,fi} = 0.25 \times V^0_{Rk,c}$  (R30, R60, R90),  $V^0_{Rk,c,fi} = 0.20 \times V^0_{Rk,c}$  (R120) with  $V^0_{Rk,c}$  as initial value of the characteristic resistance in cracked concrete C20/25 under normal temperature according to ETAG 001, Annex C, 5.2.3.4.

In absence of other national regulations the partial safety factor for resistance under fire exposure  $\gamma_{M.fi} = 1,0$  is recommended.
